ABOUT ME

I am passionate about Information Technologies, constantly learning new skills in software development and embedded systems. My focus is on creating practical solutions that make a difference.

Birthdate: 22.12.2000

INTERESTS:

Programming • Web Development •
Embedded Systems • Electronics •
Internet of Things • Game
Development

EMIR BEKRIJA

EDUCATION

2016–2020

Srednja elektrotehnička škola Sarajevo

Field of Study: Računarstvo i informatika

2020–2022

Faculty of Electrical Engineering, University of Sarajevo

Field of Study: Računarstvo i informatika

2022–2025

International Burch University

Bachelor of Science in Information Technology – Graduated

EXPERIENCE

December 2024 - February 2025:

Internship - Software Engineering Intern at Planika

Developed a **Helpdesk System** to streamline customer support and issue tracking for Planika. Built the system using PHP (FlightPHP framework), JavaScript, and SQL, implementing a ticketing system that allowed users to report issues, track progress, and communicate with support staff. Designed a database structure for efficient issue categorization and resolution tracking, improving customer support response times.

March 2024 - June 2024: Programming 2 Demonstrator

At International Burch University, I taught C++ to fellow students, guiding them through programming concepts and ensuring they grasped complex programming techniques through hands-on practice and real-world examples.

PROJECTS

2025: Smart Price Tracker – Senior Design Project

Developed a **web scraping system** that collected product prices from multiple e-commerce websites and compared them to detect potential misleading sales practices. Implemented **BeautifulSoup** and

Selenium for data extraction, stored results in an SQL database, and built a **web dashboard** using jQuery and PHP to display the latest price trends and comparisons.

2023: Website Testing

Tested the Cinestar website as part of the Software Verification, Validation, and Testing course. Utilized Selenium for automated testing to detect bugs, ensure consistency, and verify site functionality.

2024: NLP Sentiment Analysis

Conducted a Natural Language Processing (NLP) project focusing on sentiment analysis of Twitter comments. Preprocessed data, applied tokenization, and used machine learning models to classify sentiments. Analyzed results to extract insights into user opinions and trends.

2024: Embedded C Seminar

Delivered a seminar on Embedded C programming for Nios II microcontrollers, covering key concepts, the differences between standard C and embedded C, and best practices in embedded systems development.

2024: Real Estate Marketplace

Developed a full-stack web application for a real estate marketplace, utilizing system analysis and project management methodologies to ensure the project adhered to all specifications and requirements.

2024: Full-Stack Food Blog Web App

Developed a full-stack web application for a food blog, where users could upload, save, and comment on recipes. The app was built using jQuery, HTML, CSS, PHP, and SQL for database management.

2024: Mobile Field Booking App

Developed a mobile app using Kotlin, Jetpack Compose, and SQLite, which allowed users to upload and rent sports fields. This project was part of the Introduction to Mobile Programming course.

2024: Secure System Development

Developed a secure login/sign-up system using OWASP Top 10 standards for the Secure Software System Development course. Implemented secure PHP APIs and ensured the app followed modern security practices.

2024: HCI Design

For the Human-Computer Interaction course, I created both web and mobile UI/UX designs using Figma. The project emphasized user experience and design principles.

2023: Blockchain Digital Library

Built a digital library platform using Solidity for blockchain functionality. The app allowed users to upload, buy, and sell books on the blockchain. As an admin, additional features were available, such as managing users and viewing transaction history.

2023: Real Estate Platform

As part of the Software Project Management course, I helped develop a real estate platform. The project included a complete product roadmap, wireframes, product backlog with user stories, and

prioritization. I also contributed to backlog estimation and UI/UX design.

2023: Ludo Game in Golang

Developed a fully functioning Ludo game in Golang as part of a programming languages project. The project provided deep insights into the Go programming language and its practical applications in game development.

2023: Car Deal Project

Led the design and development of a car rental system for the System Analysis and Design course. The project involved writing functional and non-functional requirements, creating UML diagrams (use case, class, and object diagrams), and ensuring the system met stakeholder expectations.
